

Restart strong

A guide to creating the new healthy workforce

[Aetna.com](https://www.aetna.com)

00.02.258.1 A (9/20)

As states continue relaxing stay-at-home orders and other restrictions, more and more of us will soon return to stores, offices and other facilities. As a result, creating a safe environment for your employees and customers is more critical than ever.

We can help. We've developed a healthy workforce tool kit with five areas of focus.

Read on for some considerations to keep in mind as you develop the strategy that best fits your worksite needs.

Aetna is the brand name used for products and services provided by one or more of the Aetna group of companies, including Aetna Life Insurance Company and its affiliates (Aetna).

Screenings and testing, mental health support and changes to facilities can all help safeguard employees.

Three key areas of focus for health and safety

Testing considerations

Testing may be a part of your return-to-work protocol, depending on public health standards and availability of tests. If so, you'll want to consider who, when, where and how frequently to test. Testing is typically available to individuals who meet criteria established by the Centers for Disease Control and Prevention (CDC), in addition to state residency and age guidelines. **Watch this short video to find out more about COVID-19 testing at CVS Pharmacy® locations.**

Over half of large employers require employees to complete a symptom checker before reporting to work.¹

54% of large employers are mandating that employees be symptom-free for a specified period of time before returning to work.²

Telemedicine

As you think beyond COVID-19 testing and about supporting the whole health of your employees, it's important to recognize and promote telehealth as an integrated part of an individual's overall health care journey. Video visits are convenient and affordable and minimize exposure to the virus.

Two-thirds of large employers are encouraging employees to use telemedicine during the coronavirus outbreak.¹

We're offering \$0 copays* for behavioral and mental health telemedicine.

Two-thirds of respondents in a 2020 survey say the pandemic increased their willingness to try telehealth in the future.²

“

When facing any health crisis, including this pandemic, we're uniquely positioned to understand consumer and patient needs and how to address them. This includes increasing access to medicine and virtual care, and testing thousands for the virus every day to ready our country to reopen safely.

Larry J. Merlo

Chief Executive Officer, CVS Health

Caring for your employees' mental well-being

During difficult times, there's so much that can feel outside of your control. But you don't have to solve the problem to support your staff. Instead:

- Show empathy.
- Stay visible.
- Provide updated and accurate information.
- Be as transparent as possible about workplace decisions.

And remind your staff about their benefits, including services to help with emotional and financial stresses. Even employees who lose their positions may have access to these services.

Our Resources For Living® program is providing mental well-being services for all employees, even if their plans don't include it. With this program, employees can:

- Get real-time phone support. Employees whose plans include the Resources For Living benefit can find the phone number in their plan materials. Those who don't have it can call us at **1-833-327-AETNA (1-833-327-2386) (TTY: 711)**.
- **Listen to podcasts** about grief, loss, resiliency, self-care, empathy and other relevant topics.
- Learn how to reduce stress and manage emotional health with our **COVID-19 behavioral health resources**.

The majority of large businesses say employee anxiety around returning to work is a top challenge of reopening.¹

Workplace and policy best practices

Now that we've addressed employees' physical and mental well-being, here are some considerations for safeguarding your worksite.

- Reinforce physical distancing standards.
- Develop guidelines about allowable occupancy capacity and reconfigure physical layouts.
- Identify hoteling spaces to be used by employees who do not work on-site every day.
- Revisit cafeteria seating, food service configurations and menu offerings to maximize adherence to physical distancing.
- Post signage to reinforce physical distancing, sanitation and hygiene protocols.
- Develop playbooks for workplace maintenance, services/amenities and communications.
- Review government and CDC guidelines on phased approaches to returning to the workplace.

¹Business Group on Health. **Return to Work and Other Challenges During the COVID-19 Pandemic**. Business Group on Health website. May 2020.

Business leaders must prepare for different scenarios as they plan their reentry strategies.

Consider these options

- Reconfigure your facility for below maximum occupancy (i.e., 25%, 50%, 75%, etc.).
- Provide an ease-in period to allow employees to temporarily continue working from home and/or work limited days or shifts.
- Determine which roles might be appropriate for a longer-term/permanent work-from-home arrangement.
- Take into account which employees are able to commute by personal vehicle versus mass transit.

The majority of large employers have restructured employee schedules (e.g., staggered shifts).¹

It's essential that you re-engage your workforce in order to maximize their potential to address evolving organizational needs.

Maintaining a high-performing workforce

- Give employees the tools and resources they need to be successful.
- Establish quantifiable metrics for productivity.
- Support employee wellness with a culture that promotes mindfulness and inclusion.
- Boost morale with ongoing feedback and positive reinforcement.

Most employers say they will adopt broader, more flexible work-from-home policies.²

²The Society for Human Resource Management. **COVID-19 Research: Returning to the Workplace.** The Society for Human Resource Management website. May 2020.

There are three critical elements to consider in evaluating management readiness.

Consistent messaging

Support leaders and employees with clear, concise, proactive communication.

Support infrastructure

Leverage content, tools and resources developed through the lens of the employees, leader and company to respond to the coronavirus pandemic.

Change-management support

Gather content from other workforce management work streams to provide one consistent approach company-wide.

Two-thirds of large employers are communicating with employees about the coronavirus at least once a week.¹

There are several factors to consider regarding talent processes during the pandemic.

Compensation

- Paid quarantine leave for those who fall ill or test positive for the coronavirus
- Appreciation bonuses for frontline workers
- Premium pay for employees who staff company testing centers

Benefits

- Additional paid sick time to encourage employees to stay home if they are ill
- A medical plan that covers 100% of COVID-19 testing and treatment

Family support

- Transitional paid dependent care to assist employees with sudden and unexpected closings of schools and daycare facilities

Flexible schedules

- Reinforcement of business incentive compensation goals
- Maintenance of normal salary increases and promotional opportunities

Nearly all large employers are offering flexible working hours for employees with children at home due to school and daycare closures.²
